

Enabling Today's Science for Tomorrow's Breakthroughs...

Creating breakthrough medicines that change patients' lives starts with a commitment to identify the health challenges of the future and advance emerging science. Independent and family-owned, we have the freedom to pursue our long-term vision with distinctive approaches that enable new journeys of discovery today that will transform the lives of patients in generations to come.

Making a difference
by working together
to lead the science and
pursue innovation on
behalf of patients
around the world.

Joining forces in true collaborations, listening to and learning from our partners, to advance innovation in: **CardioMetabolic Diseases, CNS Diseases, Immunology, Oncology, Respiratory Diseases and Retinal Health...**

Exploring new ideas and technologies across the research spectrum through our global **Research Beyond Borders** division – our radar for the next wave of innovation. Areas of specific interest include **Gene Therapy, Regenerative Medicine, Immune-Infection** and the role of the **Microbiome** in human health and disease...

Investing in biotech and start-up companies with our **Corporate Venture Fund**, with a focus on concepts and technologies that have the potential to provide ground-breaking therapeutic platforms...

Fostering open science through **opnMe.com**, by sharing molecules with the scientific community, at no cost, to unlock their full potential and enable new disease biology in areas of high unmet medical need...

Championing the next generation of life-science entrepreneurs through our **Grass Roots** initiatives which offer personalized mentorship through our **Office Hours** program, facilitate knowledge sharing and networking at our **Academy** sessions, and provide valuable resources with our **Innovation Prize** to help entrepreneurs advance their ideas...
